

MacBook Air

“ We selected SafeDock as it works as a standalone riser as well as a lock. Since I've been using SafeDock I haven't had to judge whether it's acceptable to ask a client to lock their meeting room door whilst we take a break.

I pop the lock on and most clients don't even notice. Those that do are intrigued – it makes a good conversation piece! ”

Paul Allen - Owner

Lightweight Peace of Mind for MacBook® Air

Business: Paul Allen Media

Industry: Digital Marketing Management, Social Media Training & Consultancy.

The Problem:

Paul Allen Media consultants currently use MacBook Airs to deliver their sessions. Lightweight and powerful, MacBook Airs are often the Ultrabook of choice for creative and consultancy industries.

Due to the nature of the service provided, it is not an unfamiliar scenario that a training session is delivered in digestible chunks throughout a day, broken up by breaks. Refreshments and lunch are often taken in another room or sometimes at another location. Paul Allen Media needed a solution that allowed them to secure their MacBooks without causing offence to their clients or compromising the portability of the MacBook Air.

The Solution:

Kensington's SafeDock™ for MacBook Air. The SafeDock was selected as it provides both the convenience of a cable lock and the added convenience of a riser.

How it works:

The MacBook Air's keyboard is slid into the SafeDock. Once fully inserted a slim line hinged security door is closed to prevent the MacBook Air from being removed. The slim line door is shut closed, and secured, when a ClickSafe® lock is attached to the ClickSafe Security Anchor.
