INTEGRATED SIGN HOLDER**

# Quartet® Heavy Duty Telescoping Easel

Newly redesigned, these display easels have additional versatility that makes them an ideal choice for virtually every display environment. Two sets of sign holders, an integrated flipchart pad holder and more helps you to catch the eye of your audience. Heavy-gauge aluminum construction ensures lasting strength and durability.

**Sturdy Design.** Made of heavy duty aluminum this easel is very durable. The tripod base is also great for stability. The two front legs of this display easel are indexed with numbers. Set both legs to the same setting and it will be perfectly level. An integrated top clamp also prevents your display from toppling over. The clamp retracts when not in use.

**Two Sign Holders.** With an additional set of sign holder that most display easels don't have, this Quartet easel can hold two displays at once. You can set up one sign on top of another, or take advantage of the lower sign holders to set up one really large sign that is sure to catch the eye of anyone in the vicinity.

**Integrated Pad Holder.** Use this display easel in your office for your next meeting or presentation. The flipchart pad holder is integrated, but movable. It clips to the back leg to stay out of the way when not needed. The pad holder can also be placed near the bottom to serve as a marker tray, or provide extra support underneath your display.

**Suitable for Any Environment.** This display easel is great for a variety of uses. Attract visitors to your booth at a trade show, welcome guests in your lobby or use the flipchart option to lead a productive meeting. This easel can even be used outside, which is great for artists. Integrated spikes keep it in place in grass or dirt.
