

Digital Print Media

Grand Format Textiles

SEAL textiles offer a variety of advantages over vinyl media for many applications. The most important being their light weight, flexibility, ease-of-handling, non-reflective finishes, and a superior product selection. Most of our textiles are processed with our specialized digital coatings, which assure a sharp, crisp print quality, but maintains the texture and feel of the original fabric. Our PVC flexface products are typically used for outdoor applications, such as banners, signage and building wraps. They are available in different levels of product thickness and tensile strength depending on application and job requirements.

Banner

Artist Premium Heavy S

This versatile, 100% polyester, heavy canvas structure works well with a variety of display graphics - especially trade show backdrops and as a backlit. It is available in a wide variety of sizes, and will maintain its superior color brilliance outdoors for up to six months. Meets NFPA 701, B1 and M1.

PES Banner 240

PES Banner 240 is a 100% polyester fabric media designed for solvent and eco-solvent digital printing. Its tight-weave structure makes it slightly elastic - ideal for stretch-frames and banner stands. Its specialized coating ensures sharp images and brilliant color, yet it remains soft to the touch and wrinkle resistant. Meets NFPA 701 and B1.

VariTex

VariTex is a 100% polyester knitted fabric. It has a moderate stretch and good wrinkle resistance, which makes it perfect for trade show display systems. Recommended for indoor use. For use with latex, UV-curable, aqueous pigment and dye sublimation water based inks.

NEW GF Monet Light

Monet Light is a medium weight 9 oz/yd² glossy polyester and cotton mix canvas. It features a bright white point that delivers photo quality images. Use Monet Light for giclee artwork and framed portraits. Designed for use with eco-solvent, latex and UV-curable printers. Meets NFPA701.

Blockout

No-Lite 335

No-Lite 335 is a 100% blockout textile. It features asymmetrical sides which can both be printed on. Best imaging is achieved with UV-curable inks. For indoor use only. Meets NFPA 701.

Cottons

Cotton Premium Heavy S

Cotton Premium Heavy is a heavy linen weave, and is made from 100% natural fibers - providing an earth-safe way to achieve photo-realistic print quality. Recommended for indoor use only.

Flags

TCS Flag Plus

This transparent fabric features 100% Trevira CS polyester, and promises excellent color brilliance for outdoor applications, even after six months of environmental exposure. Other fabric benefits include a nice bleed through effect, plus it is wrinkle and crease free. Meets NFPA 701, B1, M1 and C1.

PVC Flexface

PVC Premium Frontlit

PVC Premium Frontlit is a 100% polyester that features a PVC topcoat on each side. It is fungus and UV resistant - making it ideal for indoor or outdoor frontlit applications. Meets NFPA 701 and B1.

PVC Premium Backlit

PVC Premium Backlit is polyester that is double-side coated with a PVC topcoat - creating the perfect material for backlit applications. It is also fungus and UV resistant. Meets NFPA 701 and B1.

PVC Supreme Mesh

The PVC Supreme Mesh is a closed-hole mesh that is PVC coated on both sides. It is an ultra-durable material and is fungus and UV resistant. Meets NFPA 701.

NEW PVC Premier Mesh with Liner

Premier Mesh with liner is a 10 oz/yd² closed hole print media. It features a thin PVC backing that allows it to be printed without the use of a mesh printing kit. It's designed for use with eco-solvent, latex and UV-curable printers.

Product	Material	Size width in inches				Weight oz/yd ²	NFPA 701	Solvent	Latex	UV	Dye Direct
